THE AUSTRALIAN SPECIES OF ROBERTSONIA (CRUSTACEA, HARPACTICOIDA), WITH A REVISED KEY TO THE GENUS

By R. Hamond

Department of Zoology, Melbourne University, Victoria

Figures 1–41. Manuscript received, 28th March, 1972.

SUMMARY

Two species of copepods of the genus Robertsonia are described and figured, *R. propinqua* (T. Scott) from saline lakes in south-east Australia and *R. barnesi* sp. nov. from the intertidal zone of north-eastern Queensland. A new key to all known species of the genus is provided.
